Soluzioni Tecnologiche Integrate

Advanced Video Surveillance

Our video surveillance systems integrate the **latest video analytics and artificial intelligence technologies**, transforming simple recording into an active security system capable of identifying relevant events, reducing false alarms, and effectively supporting prevention.

Our solutions ensure **full control, prevention, and traceability**, with centralized management and secure remote access, fully compliant with operational requirements and data protection standards.

Integrated Alarm Systems

We design **highly reliable intrusion detection systems** to prevent and immediately respond to any unauthorized access attempt. Advanced sensors, intelligent perimeter barriers, and **integration with video surveillance and AI** ensure complete protection, with centralized or app-based management and real-time notifications, including alerts to private security services. Each system is carefully tailored to the real operating environment to minimize false alarms and guarantee maximum effectiveness.

24/7 Technical Support

Security never sleeps. Neither do we.

That's why **we provide continuous technical support**, with constant remote monitoring, rapid intervention when needed, and always-available specialized assistance. Scheduled maintenance ensures long-term efficiency and reliability of the systems, **preventing critical issues and guaranteeing consistent**, secure performance over time.

Video Surveillance & Alarm Systems

We develop integrated security and risk mitigation solutions, based on professional copper and fiber optic infrastructures, with industrial PoE switching and certified cabling, designed with redundant architectures to guarantee 24/7 operational continuity.

Soluzioni Tecnologiche Integrate

Corporate PBX Telephone Systems

We provide **professional PBX systems for businesses, designed to ensure efficient call management and seamless communication.**

Custom configurations and integration with existing infrastructures, SIP lines, and professional IP devices, combined with intelligent call routing, deliver secure, reliable, and continuous operation.

We place particular focus on business continuity and communication security, essential for any organization that relies on telephony in day-to-day operations.

Business VoIP & Multi-Site Systems

Leonardo Network's VoIP solutions are designed for **modern businesses, call centers, and multi-site organizations that require a flexible, scalable, and centralized communication system.** With VoIP technology, multiple locations can be managed as a single infrastructure, while maintaining **geographic numbers, shared extensions, and full call control.** Our multi-site systems connect offices across different cities or countries, integrating on-site workstations, smart working, and remote operators into one unified platform. Our solutions are engineered with a strong focus on **audio quality, connection stability, and data security.** Integration with professional LAN networks, firewalls, and cloud services delivers a modern, reliable infrastructure that is ready to grow with the company.

Corporate PBX & VoIP Systems

Each system is custom-designed, taking into account the company's actual operational needs, future scalability, and seamless integration with existing IT systems.

Soluzioni Tecnologiche Integrate

Copper and Fiber Optic Wired Networks

We design and deploy professional copper and fiber optic networks, including **complex and multi-site infrastructures**.

Redundant architectures ensure **high performance, operational continuity, and long-term reliability**. All projects are built using **certified components and enterprise-grade technologies**, with a strong focus on security, scalability, and overall system quality.

High-Performance Wi-Fi Infrastructure

We design **enterprise-grade Wi-Fi coverage for hotels, resorts, restaurants, and high-density environments**, engineered to deliver uniform signal distribution, seamless roaming, and **consistent performance even with a large number of connected users**.

Our solutions focus on **quality of service, reliability, and advanced management**, because a wireless network must be a stable infrastructure, not just an accessory.

Professional Wired & Wireless Networks

Each network infrastructure is carefully designed based on real operational requirements, ensuring optimal performance, data security, and service continuity, through scalable and future-ready solutions.

Cybersecurity

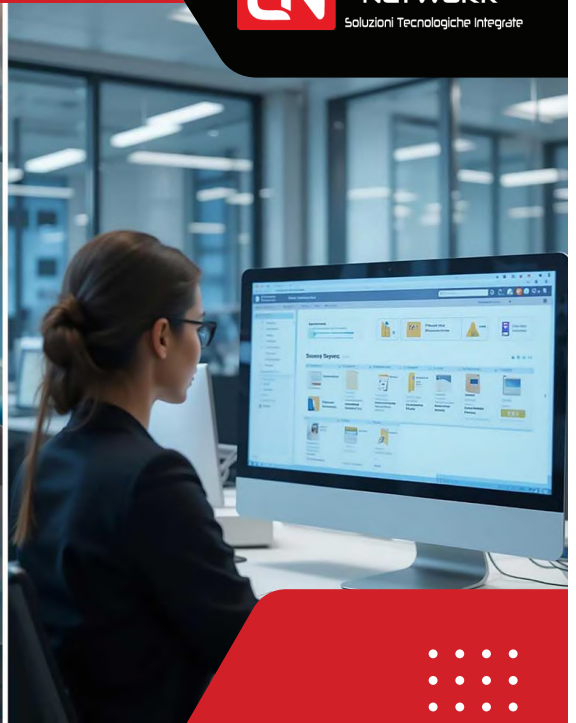

We design advanced **cybersecurity solutions to protect IT infrastructures, corporate networks, sensitive data, and information systems**. Each solution is developed through a thorough vulnerability assessment and tailored to specific needs, **integrating prevention, monitoring, and incident response tools**. Our services include **perimeter protection, access control, network security, threat management, and continuous monitoring systems**, with the goal of **reducing risk and ensuring business continuity**.

AI Solutions for Business Optimization

Artificial Intelligence is now a key value driver in **managing security and business processes**. We integrate AI solutions for **data analysis, anomaly detection, process automation, and decision support**, improving operational efficiency and reducing the margin of error. Our AI solutions are **designed to work in synergy with existing systems**, delivering advanced yet practical tools for organizations that want to innovate without losing control.

Cybersecurity & AI Solutions

Cybersecurity is now an essential part of digital evolution, protecting data, systems, and critical infrastructures, while artificial intelligence analyzes, prevents, and optimizes, making processes safer and more efficient.

Custom Software Solutions

We design and **develop custom software solutions starting from an in-depth analysis of business processes and real operational needs.**

Each application is built to optimize workflows, improve internal organization, and increase overall efficiency.

Our management systems, **CRM, and ERP solutions are designed to fit the client's operating context**, integrate with existing systems, and scale over time as the business grows, ensuring reliability, scalability, and full control.

Desktop and Web-Oriented Development

We develop **desktop and web-oriented applications using the leading programming languages** and the most widely adopted professional technologies.

We deliver **solutions integrated with Oracle, Microsoft SQL Server, MySQL, and PostgreSQL databases**, engineered to ensure stability, security, and high performance. Each project is structured to guarantee flexibility, ease of maintenance, and **full integration with existing IT infrastructures, business systems, and external platforms**, providing solid, modern solutions designed to evolve over time.

Custom Software & Programming

Software development starts from a deep understanding of real business needs, transforming complex processes into simple, efficient, and scalable solutions designed to evolve over time together with your business.

Professional Websites

We build **high-performance corporate and e-commerce websites** designed for security, scalability, and reliability.

Our **projects focus on user experience, structured content, and seamless integration with business systems, online payments, and external platforms.** With deep expertise in major CMS platforms, including **WordPress, Joomla, PrestaShop, Magento, and Drupal,**

we develop custom plugins and server-side solutions to meet specific operational needs.

Professional Websites & Android / iOS Apps

The development of a website or an app starts from an idea, evolves into functionality, and becomes a concrete business tool, always aligned with user needs.

Android / iOS Apps

We design and develop **native Android and iOS applications integrated with business systems, databases, and cloud services.**

Our apps are engineered to deliver **high performance, intuitive user interfaces, and maximum reliability,** providing tailored solutions for business management, customer services, e-commerce, and process automation. Each project is **designed to evolve over time, supporting business growth and strengthening the company's digital visibility.**

SEO

WWW

SEO Optimization

Our SEO services are designed to **enhance search engine visibility** and ensure sustainable online growth.

Through in-depth analysis of site structure, content, technical performance, and user behavior, **we optimize every element that impacts ranking and indexing**. We work on on-page and off-page SEO, content quality, and site architecture to **attract qualified traffic and turn it into measurable business value**.

Digital Marketing

We **design and manage digital marketing strategies focused on brand growth and customer acquisition**.

Our services include online **marketing campaigns, social media management, communication strategies, email marketing, and data analysis**, always following a measurable and results-oriented approach. Each strategy is tailor-made according to the **company's objectives, integrating monitoring and reporting tools to continuously optimize performance and maximize return on investment**.

SEO Optimization & Digital Marketing

Online visibility is built through a structured approach, combining SEO optimization and integrated digital marketing to strengthen brand positioning, attract qualified traffic, generate measurable opportunities, and convert visitors into long-term customers.
